

Promantra Synergy Solutions Limited

A provider of long-term health care solutions using innovation and technological excellence.

The product: Promantra has launched “Virtual Patient Care,” that adds an extra layer of monitoring for Skilled Nursing Facility (SNF) patients, using in-house developed software, GeroPro and other electronic technologies.

The innovation: The innovation provides an extra set of eyes to look at things, watch trends and catch changes in a patient’s health conditions, quicker than they would at the SNF. The processes at a nursing facility are replicated at Promantra. Information is gathered from the nursing stations and fed into the GeroPro modules. The process is automated by the use of PDAs (pocket PCs) by nurses and Interdisciplinary Teams.

On verifying the vital data received at Promantra, the clinical process team cross verifies, validates and identifies the key areas of risk and updates care plans, which are implemented by the facilities. The root cause analysis is undertaken and corrective measures are developed and implemented on a case-to-case basis. The primary aim of the CPA is to provide Quality Patient Care. It complies with Quality Audits, Survey Standards and Guidelines. It reduces non-conformances and citations during State and Federal Surveys and achieves 100 percent compliance in all areas.

Product highlights

- The virtual care software (GeroPro) has smart alerts built into it, which flag the trends in the patient’s health.
- It offers improved quality of care, improved accuracy with the implementation of validation, quality audits and reminders and alerts by the clinical process team.
- The innovation reduces documentation time for nurses.
- It provides quality indicator reports for state and federal surveys and measures quality of care provided.
- The product decreases turnaround time with the availability of information in GeroPro
